AIR-CONDITIONING
SYSTEM FAILS TO
DELIVER OPTIMUM
PERFORMANCE AT
LOWER LEVELS...**

**YOU'RE BOUND
TO GET
COLD FEET.**

INTRODUCING NEW ECO AUTOMATIC

Environmental Ceiling Automatic Diffuser

Comfort and energy savings are just two of the many features of the new ECO Automatic Diffuser – the revolutionary air-conditioning ceiling vent.

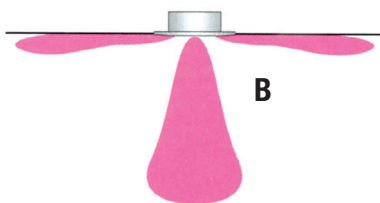

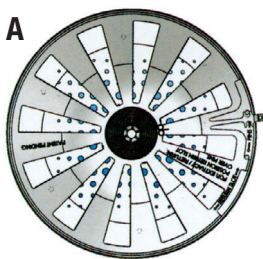

Sleek in appearance and design, the ECO Automatic Diffuser is a great 'value-add' replacement to your existing ducted air-conditioning ceiling vents.

The unique design of the ECO Automatic Diffuser allows for the warm or cool air, as the case may be, to spread across the depth and width of the room to bring the temperature to your desired level of comfort quickly...thereby, reducing the run-time of your air-conditioner. This directly translates to a noticeable reduction in your energy consumption.

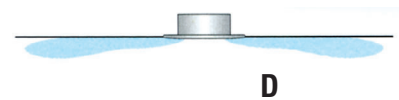

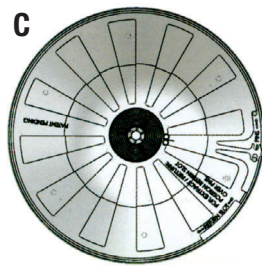

How does ECO Automatic Diffuser work?

A built-in air temperature sensor activates the opening or closure of the horizontal and vertical air outlets determining the most efficient direction of air flow into the room.

In winter, when you set the air-conditioner to deliver warm air, the temperature sensor activates the 'damper' to open (illustration 'A') when the supply air temperature is above 30° C, this allows the warm air to disperse both vertically down into the room as well as horizontally across the ceiling...at the same time (illustration 'B').

On the other hand, in summer, when you set the air-conditioner to deliver cool air, the sensor activates the 'damper' to close (illustration 'C') when the supply air temperature is below 24° C, this disperses the cool air horizontally across the ceiling to gently and efficiently bring the room temperature down to comfortable levels (illustration 'D').

**Seeing is believing.
Experiencing is convincing.**

If you already have ducted air-conditioning in your home, our quick in-home demonstration will prove to you the superior functionality of the ECO Automatic Diffuser, and also its ease of installation.

ECO Automatic Diffuser easily retrofits standard diffusers. Available only in white, they blend in to complement your existing room décor.

As providers and installers of your ducted air-conditioning system, we make it our business to not only maintain its efficient running, but to also bring you the latest innovations, as they happen, to enhance your comfort and lifestyle.
